Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ericksen et al '062.

Ericksen et al show all of the claimed features except for identifying at least one of the PAV intervals that is equal to a programmed interval. Ericksen et al teach decrementing PAV intervals, see Fig. 8. It is inherent the PAV interval subsequent to a sensed premature beat is prolonged because this conserves pacemaker energy and prolongs battery life.

One of ordinary skill in the art would have found it obvious to identify at least one of the PAV intervals because Ericksen et al teach maintaining the escape time from the previous ventricular event until the current ventricular event. See col. 8, lines 16-28.

Regarding claim 4, the examiner is interpreting simultaneous smoothing of the atrial and ventricular rates to comprise dynamic pacing illustrated in Fig. 9.
